**Davis Gardens**

Kings, Ill.

In presenting this Catalogue we wish to take this opportunity to thank our many customers of the past for their orders, also those of you who gave us orders last summer at blooming time.

We also wish to invite every one of you to come and see our gardens in bloom this summer.

We have quite a few varieties not listed as we have a limited amount of them. If there are some varieties that you wish that we haven't listed, please write us.

We are located in Kings, Illinois, on State Highway 64—22 miles south of Rockford and 80 miles west of Chicago and 11 miles east of Oregon, Illinois.

## ***Gladiolus Cultural Directions***

A plot which will produce good vegetables will produce good gladiolus spikes. Select a planting plot away from trees or buildings. Tree roots rob the ground of moisture and buildings reflect heat.

**PREPARE YOUR GLAD BED WELL.** Plant bulbs 5 to 6 inches deep. Space them 6 inches apart in the row.

Since all people do not kill thrip at planting time, there is danger of getting thrip from other gardens because thrip can fly and are also carried by the wind, so when your glads are about 6 inches high start spraying or dusting to prevent thrip injury.

Make a spray solution by dissolving 1 ounce of 50% wettable DDT in 3 gallons of water. If you prefer dusting use 5% DDT in a small dust gun. **SPRAY OR DUST EVERY 10 DAYS** up to blooming time. All sprays and dust are poison.

Glads are primarily cutflowers. Cut the spike when the first flower opens and develop them indoors. They will open in water, and you can enjoy them indoors a long time. When cutting the spikes leave at least 4 leaves on the plant to develop the bulb for next year.

October is the usual bulb digging month. Lift the bulbs with a spade. Cut the stem off close to the bulb. Dry them in shallow boxes or trays until dry enough to remove the old bulb and roots, then dust the cleaned bulbs with 5% DDT and store in cloth bags, screen bottom trays or shallow boxes in coolest place you have but they dare not freeze.

All stock offered subject to prior sale. Where bulblets are listed by the "packet" there will be 50 to 100 bulblets or more in package. Five bulbs will be sold at one-half the price per ten.

## ***Bulb Sizes***

Glad bulbs are graded into six sizes: No. 1 bulbs are 1½ inch or larger in diameter. No. 2 is 1¼ to 1½ inch in size. No. 3 is 1-inch to 1¼ inch. No. 4 is three quarter inch up to 1 inch. No. 5 and 6 are one-quarter inch smaller with No. 6 being a half inch bulb, and considered the smallest size sold commercially. "Large" bulbs are considered No. 1 and No. 2. Mediums are No. 3 and No. 4 mixed. Small bulbs are Nos. 5 and 6. Most varieties will produce a very good bloom from medium bulbs, and Nos. 5 and 6 will usually bloom altho quite late in the season. Many varieties will supply a fair bloom from well grown bulblets.

## *The Ten Prettiest?*

This is only our opinion, based mostly on last year's performance and only takes into consideration the one we have in some quantity.

Mother Fischer, Dieppe, Noweta Rose, Red Wing, Burma, Friendship, Lavendar Lace, Aureole, Columbia and White Lace.

## *Mixed Bulbs*

Here is your chance to save plenty — If you are one of those gardeners who love flowers but do not care to grow each variety separately, by name, you can get tremendous value in these mixtures. Bulbs are first quality and are hand mixed to give splendid color combinations. If you want lots for little money, the small bulbs offered will bloom this year. Blooms will be a little smaller but you will have a fine crop of large bulbs for next year. Look for them near the back of this catalogue.

**TERMS**—Cash with order—or remit 25% with order and balance may be remitted before shipping date—or we will send COD for the balance if you prefer. Minimum order we can accept is \$2.50.

All bulbs have been state inspected and dusted with 5% DDT powder to insure them being thrip free at planting time, however as thrip fly, your plants should be dusted with DDT throughout the summer.

If your order is found to be unsatisfactory you may return it at once and we will refund your purchase price.

We will send only healthy bulbs, true to named varieties. We do not guarantee the growth of the bulbs due to many cultural methods and climatic conditions. Unless otherwise requested orders will be acknowledged in receipt and shipment made after danger of freezing is over.

### **MOMENTO—442—85 days**

### **OUR 1953 INTRODUCTION**

Agarita Seedling Originated by C. S. De Neir. Registered by Davis Gardens (Seedling No. 48-237.)

Momento is a tall slightly ruffled or crimped frosty light pink with a cream throat. It grows around 55 inches tall with 4 or 5 inch florets. It grows very beautiful, double rowed spikes with nice floret formation. It is a very husky and healthy grower. It has a 29 inch flower head with 22 buds which open 8 to 12 with 8 in color. It also opens readily in water. The bulblets germinate extra well and bloom in an average season. It seems to bloom later than other good pinks. Florists who saw this glad, thought it was a very good one. The florets are strongly attached and are placed exceptionally well. It is just the right shade of pink, neither too light nor too dark. It did very well again in our dry season of 1953.

This very pretty perennial is second only to gladiolus in our gardens. We have a great many new kinds, including several varieties of the new flamingo pinks. We extend an invitation to you to come and see them in bloom.

## *India Lily Bulbs*

One free with retail order of \$15.00 or more as long as they last. They are planted and dug about the same time as glads. They bloom in the late winter from the dry bulb. The bloom stalks grow 5 to 6 feet high so the bulb should be placed in a pail or a box to keep it in an upright position and to give it some support. It has a very large and different yellow bronze flower.

The premium bulbs we have need only to be grown one more season and should bloom the following winter. It takes 3 years to bring them to blooming size. They bloom year after year then the bloom stalk dies down and the remaining bulb should be taken back to the cellar or a cool dark place until planting time again. All bulbs should be stored right side up so as not to injure the shoots which usually start in January or February.

\$2.00 each without sufficient bulb order.
